Network Appliance Platform

Product Overview

The Edgecore Network Appliance Platform utilizes standard Intel®x86 architecture that provides openness and flexibility to fulfill various use cases in different vertical markets. With the advent of SDN and NFV, the platform supports open-source-based software or 3rd party VNFs that enable Service Providers to deliver and deploy innovative services and applications with agility and scalability.

In the emerging 5G networks and edge computing, the platform is an excellent choice for Service Providers to deliver Residential and Enterprise vCPE/uCPE solutions from the cloud or edge cloud.

The platform supports a range of fixed Gigabit Ethernet ports for connectivity along with HDD storage, which are all contained within a compact desktop form-factor.
